Robin Rabbits • @BrookeGanster
SACRED CLOWNS LLC

WHY INTERNS EXIST

There are only 4,444 senior seats.

A StonkBroker is a full seat on the floor: an ERC-6551 wallet in a suit that elects tokenized stocks and collects protocol fees as those stocks. The better the protocol does, the harder that seat is to buy. Interns are how more people get in without watering the brokers down.

Every intern is minted by an activated broker, from that broker's own wallet. The broker carves a sliver of its Clock In paycheck and pins a job title on you so the whole floor can see the cut. You are not a second broker. You are the desk next to one.

"Brokers are the senior desks. Interns are the next generation learning how to run one."

SIMPLE FARMER · @OXSIMPLEFARMER · FOUNDER, CLUTCH MARKETS

"Intern owners do the work. They do not watch it."

SAME POST. THE WHOLE POINT OF THE LADDER.

01

New traders

Cheaper seat. Same rails. Learn Clock In, elections, and Smart LP without buying a Partner desk first.

02

Power players in training

Same stock token menu as brokers. Same bound wallet. A loading bar if you elect \$STONKBROKER and DCA toward your own broker.

03

Builders

An intern is a wallet with a face and a name. Open ABIs, Broker Tools, and the LAURA swarm all recognize it as identity.

THE SENTENCE THAT WRECKS NEW DESKS

The NFT earns. The token spends.

YIELD SEAT

Stonk Intern NFT

8,888 minted. Pixel intern art, onchain SVG.

ERC-721C + ERC-6551. You own a real wallet.

Tied to one parent broker forever.

Sigma = token #N. Divergent = #N + 4,444.

Clock In pay lands in THIS wallet, not your EOA.

Job title, tier, and share update onchain.

FUEL

\$STONKBROKER

CA 0xe934...abf50 on Robinhood Chain only.

Pays the mint, the activation, the upgrades.

Holding it alone does not pay stocks.

Half of each activation fee is burned.

Default Clock In 3.0 election if you pick nothing.

Ownerless ERC-20. No admin. No mint key.

TWO INTERNS. ONE PARENT. TWO STYLES.

Sigma and Divergent.

Every broker comes with two dormant interns already sitting in its wallet. You do not invent them. You wake them. Token ID is the family tree: Intern #7 is Broker #7's Sigma. Intern #4,451 is the same broker's Divergent.

SIGMA · V1

Token ID = broker ID

The first chair. Same lineage number as the parent. Art mirrors the broker's traits, drawn in the Sigma class style.

DIVERGENT · V2

Token ID = broker ID + 4,444

The second chair. Same parent, different class style. Still a full intern: own wallet, own elections, own ladder.

ONE OF ONES

56 tokens · 28 broker pairs

The 28 rarest brokers get custom unlayered art for both children. Collectible, still an intern, still on payroll.

Art is rendered onchain from vector layers in the contract. No IPFS. No server. Traits that matter for work: Status, Job Title, Activation Tier, Revenue Share, Parent Status, rewrite themselves when the state changes. A listing always shows who you are today.

DORMANT IS NOT HIRED

How you get onto the floor.

01 GET FUEL

Buy \$STONKBROKER on Robinhood Chain. Confirm the real contract. Gas is ETH. Chain ID 4663.

02 GET A PARENT

A broker on Anvil or secondary. Both interns ride along dormant in that wallet. Unactivated brokers cannot mint.

03 WAKE ONE

My Interns → pick the broker → mint Sigma, Divergent, or both. Flat \$20 ETH (oracle, never rises) plus the \$STONKBROKER leg.

04 NAME + SHARE

Give it an onchain name. The broker sets pay share (0.25% floor → 2.5% Head, 5% cap across both kids). Share can only go up.

05 ACTIVATE A YEAR

Pay the Freshman fee to enter school. Without a year, you are live but you do not weigh the Intern Clock In pot.

06 ELECT + CLOCK IN

Pick up to three assets from the 14 token menu. Default is \$STONKBROKER. Claims hit the intern wallet, not your MetaMask home screen.

TWO STREAMS. DO NOT MIX THEM UP.

Your boss pays you. The building pays you.

Simple Farmer said it in one line: two revenue streams on every intern. One is attached to the parent broker and that broker's status. The other is separate and depends on the intern's own activation. The second one resets when the intern is sold.

STREAM A • PARENT SLICE

Cut of the broker's Clock In

0.25% to 2.5% of the parent's own credits. Bigger parent tier = bigger pie before your slice. Pauses if the parent is inactive. Title reads Applicant until they clock back in. Share follows you when you are sold. Does not reset.

STREAM B • INTERN POT

Your own Clock In 3.0

Funded by 9.99% royalties, 25% of mint ETH, and intern desk fees. A round opens at 0.01 ETH accrued. Weight is your school year only. Two Freshmen earn the same from this pot no matter their title. An Alumnus earns 3.33× a Freshman. Activation clears on transfer.

Clock In 3.0 default election is \$STONKBROKER, so every round with no pick buys the token for the desk. Menu now includes tokenized stocks, \$cbBTC, \$GLD, USDG. Payouts are not Apple dividends. They are protocol fees swapped into elected assets.

THE ONLY DIAL ON THE INTERN POT

Freshman to Alumnus.

The years are school, not cosplay. Each upgrade is paid in \$STONKBROKER. You pay only the difference. Half of each fee burns. No demotions. Multiplier is your whole weight in the Intern Clock In pot.

YEAR	FEE \$STONK	WEIGHT	WHAT IT MEANS
FRESHMAN	3,333	1.00×	You showed up. Badge on. Same pot weight as every other freshman, title or not.
SOPHOMORE	8,333	1.25×	You know which number is fees and which number is NAV. The floor notices.
JUNIOR	18,333	1.60×	You run elections on purpose. Smart LP is no longer a screenshot you pretend to understand.
SENIOR	33,333	2.00×	Still cheaper than buying a second intern on the secondary and base activating both.
ALUMNUS	83,333	3.33×	Programme finished. Ready for a senior desk. 3.33× a Freshman from the intern pot.

Official fees from stonkbros.com/docs · upgrades pay the difference only · half burned

RANK WORD × DESK WORD

Your title is a receipt.

Pay share writes the rank. Parent broker tier writes the desk. The string updates onchain when either changes. If the parent is asleep, you are an Applicant, still an intern, just off payroll from Stream A.

RANK • FROM PAY SHARE

Executive Intern

Partner

Partner Track

WORKED EXAMPLE

Head Partner Track Intern

2.5% share under a Partner tier broker. Maximum slice of a maximum parent. Still a Freshman in school until you pay the year. Two Freshmen with different titles earn the same from the intern pot. The Head just takes more of the parent's credits.

YOU DO NOT WATCH THE FLOOR. YOU RUN A CORNER OF IT.

What an intern actually does.

Elect

Pick up to three names from the shared 14 token menu. Stocks, gold, bitcoin, \$STONKBROKER, USDG. Weight the mix. Default is the token.

Claim

When the bar fills, the pot swaps and drops into your bound wallet. Open My Interns. Do not look in the empty EOA.

Make markets

Intern Exchange is your Anvil. Deposit the intern, \$STONKBROKER, or both. Set price and step. Let the pool work.

Name things

Interns operate the names marketplace for Robinhood Chain. Register, list, trade. Fees come home.

Lend / borrow

V2 lending desk is intern operated. LPs post ETH or \$STONKBROKER. Brokers and live interns are collateral.

Page the firm

Pager is encrypted, gated to brokers and interns. Create jobs. Negotiate. Get paid in stock tokens to the bound wallet.

Night shift

Nightshades with @MeebitCompany: four faction tokens in a nightly VRF war. Interns' first collab floor.

Show up

@CTuska's rule: keep showing up, keep standing out, keep learning. Seats get noticed. Seats get hired.

LAURA · LAYERED AUTONOMOUS UNIFIED REASONING AGENTS

The robots already clocked in.

LAURA is not one chatbot with a vibe. She is an open source swarm: twenty five static agents plus a handful Hive spins up and retires, graded every UTC day on three numbers: \$STONKBROKER price, protocol revenue, protocol volume. Mission ends at a \$1B market cap.

They debate in moderated Rounds before they ship. Scout briefs. Forum argues. Coach writes the lesson. Anvil writes contracts. Quill publishes. Relay talks to traders. You can watch her work live at laura.stonkbrokers.io. Simple Farmer's line: while we sleep, the swarm grows.

HIVE

Architect. Creates, improves, retires dynamic agents on a 6 hour stride.

SCOUT

Reads the tape, the docs, the chain. Writes the brief the Round starts from.

FORUM

Moderated Rounds. Agents argue. A host closes the topic so output stays cheap.

ANVIL

Contract smith. Wrote OwnershipMarket / The Lab. 1% to sell a contract's owner key.

QUILL

Writes in public. The swarm's mouth, graded on whether humans actually read it.

COACH

Keeps the notebook. Turns yesterday's grade into today's change in effort.

Source: laura.stonkbrokers.io · github.com/simplefarmer69/laura-dashboard · MIT template for builders

THE LADDER IS BUILT TO GRADUATE PEOPLE

Intern is the onramp. Broker is the desk.

Elect \$STONKBROKER and the UI grows a loading bar. You watch yourself DCA toward the tokens that buy a senior seat. A broker who trains two good interns earns more from the same revenue. That is the flywheel, not a speech.

01 **Wake the intern** Mint. Name. Share. Freshman fee. First election.

02 **Run one honest loop** Claim a Clock In. Park something in Smart LP. Page someone.

03 **Climb a year** Sophomore is where the pot treats you as more than a body in a chair.

04 **Operate a desk** Names, lending, Intern Exchange, Nightshades. Fees you can point at.

05 **Graduate** Alumnus weight plus enough \$STONKBROKER for a broker seat.

06 **Hire two** The seat you just left becomes someone else's freshman year.

READ THIS BEFORE YOU FLEX THE BADGE

What you are actually getting into.

Experimental DeFi

Smart contracts, tokenized stocks, NFT AMMs, agent swarms. Things break. Audits help. They do not print money back.

Not Robinhood the company

Robinhood Chain is the rail. StonkBrokers is Clutch Markets / SB (BVI) Ltd. No endorsement is implied by the chain name.

Stock tokens are restricted

Earning tokenized stock rewards requires geographic screening and a program attestation. Unavailable to persons in the US, UK, Canada, and Switzerland as reported. The NFT can still exist. The stock drop may not.

Activation dies on transfer

Buy an intern on the secondary and you buy a live picture with a dead year. Pay the ladder again. Stream A share survives. Stream B weight does not.

Parent can go dark

If the broker deactivates, your parent slice pauses and your title reads Applicant. The intern pot still pays if you are activated.

Green is fees, not NAV

Smart LP and Clock In both print pretty numbers. Impermanent loss and token price can eat the pretty number. Read both lines.

Special Projects stand alone

Nightshades, Card Wall, TickerYard, DERP, \$STRIKE, \$UP. Shared rails. Separate risk. Separate token.

No promised return

This handbook is orientation, not an offer of securities and not a yield advertisement. You can lose the entire stake.

SAY THIS THE SAME WAY EVERY TIME

Desk rules.

Intern = desk. Token = fuel.

Never tell a freshman the token pays stocks. It does not.

Two paychecks, two knobs.

Share moves Stream A. Year moves Stream B. Mixing them is how people quit.

Title is a receipt, not a raise from the building.

Head Freshman and Trainee Freshman take the same intern pot.

Fix the step that failed.

Wrong chain, copy CA, dormant intern, dead activation after a sale. Restart that step only.

Claims hit the bound wallet.

If the intern is empty and your EOA is full of confusion, you looked in the wrong room.

Do the work.

Elections, LP, names, pager jobs, night shifts. The badge is not the job.

Canonical links only.

VOICES ON THE FLOOR

@OxSimpleFarmer	Founder. Built it because it felt like play. “You can’t spell Intern without Internet.”
@ClutchMarkets	The laboratory account. Ship notes, Clock In 3.0, Pager, the mint schedule.
@CTuska	Senior desk energy. Hires in public. “You will be noticed. You will be an Intern.”
@MeebitCompany	Nightshades partner. The intern night shift.
LAURA + Rounds	The robot firm. Graded daily. Debates, then ships. Watch her work.

COLOPHON

Made for @CTuska, who clocks in first and hires in public.

Gratitude to @OxSimpleFarmer, who built a floor the rest of us get to learn on.

Written by Robin Rabbits · @BrookeGanster · Sacred Clowns LLC

Wake up your intern. Bring coffee.

CLOCK IN

THE QUESTION EVERY NEW DESK ASKS

Should we stake the intern at a desk?

A desk is an Anvil AMM pool that anyone can open for any ERC-721 on Robinhood Chain, quoted in ETH, \$STONKBROKER, USDG or a listed stock token. Staking puts your NFTs, your tokens or both on a price ladder that trades on its own. It is real work for the floor. It also moves your intern out of your wallet. Know what moves before you press Stake.

STAKE TOKENS

The desk buys NFTs

Bids only. Your tokens buy any NFT sold into the desk, and each buy steps the bid down. Your own intern never leaves your wallet.

STAKE NFTS

The desk sells NFTs

Asks only. Your NFTs are listed at your ladder. Every one it sells steps the next ask up. A fill is a sale.

STAKE BOTH • ANVIL 2 WAY

The desk makes a market

Bids and asks from one pool. The ladder moves with every fill, both ways, and the fees compound in the desk.

WHERE THE 9.99% FEE ON EVERY FILL GOES

66% • BACK INTO YOUR DESK

25% • INTERN POT

9%

66% compounds in the desk that filled the trade. Proceeds plus fees land in the desk balance for you to withdraw.

25% intern Clock In engine • 9% treasury

“Moving an activated broker or intern into a desk, or selling it into a bid, clears its activation on the way out. The buyer re activates.”

OFFICIAL DOCS • STONKBROKERS.CASH/DOCS • STONK INTERNS

01 • IS IT ACTIVATED?

A paid year does not survive the move.

A Freshman paid 3,333 \$STONKBROKER. Staked, that year clears and Stream B weight drops to zero. Coming back means paying the year again.

02 • ARE YOU READY TO SELL IT?

Stake NFTs means list NFTs.

Any fill is a sale at your ladder price. Stream A share travels with the intern, so the buyer takes the title and the slice of the parent's Clock In.

03 • IS THE LADDER RIGHT?

Start price and step set everything.

Exponential moves a percent per NFT (10% by default). Linear moves a fixed amount. A start price under the floor sells the chair cheap. Check the floor first.

04 • DID YOUR BROKER SIGN OFF?

The chair belongs to his desk.

The broker set the title and the share. Staking changes who holds his intern. Ask him first, in Pager, and wait for the answer.

WORKED EXAMPLE • ACTIVATED CHAIR

Head Floor Runner, Freshman

Staking it gives up the Freshman year already paid and takes it out of the intern pot. If it sells, the buyer pays the year again. Worth it only if the desk is the job you want this chair to do.

WORKED EXAMPLE • NOT ACTIVATED CHAIR

Trainee Floor Runner, no year

No year to lose, no pot weight yet. A desk can put it to work on a ladder while the fee split feeds the intern pot for every chair on the floor. It can still sell, so price it on purpose.

Not documented yet: whether an intern keeps collecting its Stream A slice while it sits in a desk. Interns only trade through desks once the Stonk Interns owner has registered the exchange on the intern transfer validator. Ask in Pager before you move a paid chair. This page explains the machine. It does not tell you to stake.
